RUBRIG rubber tiles maintenance guidelines

RUBRIG rubber tiles are super easy to keep clean and maintain. You will be amazed how good your RUBRIG surfaces will look for years to come with the proper rubber floor maintenance program and just a little planning.

RUBRIG rubber tiles maintenance for indoor use

After the installation of RUBRIG products, the surface should be cleaned according to **cleaning manual**.

1. Before cleaning remove superficial dirt and dust using a vacuum cleaner.
2. To remove dried spots, use a damp cloth.
3. Subsequently mix a bucket of water with alkaline based cleaner according to manufacturer's manual.
4. Apply the solution on the floor using a broom with medium strength bristles or a scrubber drier.
5. As soon as the dirt is released, remove it and wipe it with clean water.
6. Leave the flooring to dry completely.

Maintenance cleaning

Depending on the frequency of use, do the maintenance cleaning daily or weekly.

1. For maintenance cleaning remove dirt and dust using a vacuum cleaner.
2. Use a mixture of water and liquid soap.
3. Rub it with a cloth or mop over the stain.
4. Wipe the flooring afterwards with clean water.

Please note that solvents and chlorine containing detergents are not allowed to be used!

RUBRIG rubber tiles maintenance for outdoor use

Atmospheric exposure of rubber flooring tiles may result in the natural appearance of moss and algae. To solve this problem it is recommended to use a high pressure water cleaner until 200bar without chemical additives!

Attention! The water pressure must not be too high. The distance of water jet to the surface area should be minimum 30cm and the water temperature should not be higher than 80°C. This type of cleaning is recommended to be done once a year.

For heavily soiled surfaces and adherent impurities, you can use water and a scrubber, but you should use only a mild pad or a soft nylon brush. It is possible to use dilution soapsuds. Do not let the cleaning solution stay on the rubber floor for long periods. After cleaning, it is recommended to use water as a rinser

While removing snow in winter be attentive not to damage the surface by sharp-edged implements or overweight machinery. The application of commercial, allowed de-icing salt won't hurt the coating.

Attention! Don't use solvent based cleansing material. It can damage the product surface.

Due to their extreme durability and ease of maintenance RUBRIG rubber tiles are a universal solution for any application!
